

## **Faunistic research of the click beetle fauna of Hungary**

The main purposes of the research are to understand the life and spread of mostly saproxylic species of click beetles (Elateridae) and to record species new to the fauna of Hungary.

## **Taxonomy and faunistic research of Palaearctic click beetles (Elateridae)**

In addition to studying the life of poorly-known Balkan species by regular expeditions, this research focuses on finding species new to science.
